

VWP BLACK
OIL-BASED
TREATED AG
FENCE POSTS
WITH
25-YEAR
WARRANTY

25 Years of Peace of Mind . . .

By purchasing a VWP Fence Post customers are also purchasing the peace of mind that they will not need to replace any of those posts for 25 years.

VWP now offers a 25-year limited warranty on all new pressuretreated penta ag fence posts. Some post manufactures might verbally suggest that they offer a warranty, but when it comes right down to it, would a verbal warranty be worth anything in 5 years once the post starts to rot?

VWP guarantees that our pressure-treated penta ag fence posts will last 25 years. Our customers receive that warranty guarantee with each post they purchase. Our warranty is based on a pro-rated schedule from 1 – 25 years. Customers with a valid warranty claim will receive credit applied to their next post purchase.

Pro-Rated Formula

From 1 – 10 years of original post purchase customers receive **100**% full credit warranty.

From 10 - 25 years of original post purchase claim warranty is based on the following formula:

Per post cost on original invoice ÷ 25 years = per post cost over 25-year life
Per post cost over 25 years x __years left of warranty = warranty coverage per post

Example: A post qualifies for warranty after 20 years use from date of original purchase Original per post invoice cost of \$12.00 ÷ 25 years = \$0.48 cost of post per year over a 25-year period \$0.48 x 5 years left of the 25-year warranty = \$2.40 warranty credit per post

About Us

Located at Spruce Home, Saskatchewan, we have been serving Western Canada and the US Midwest since we started operating over 40 years ago. We are a family-owned company that prides itself on producing only the highest quality products for our customers, which is the foundation of our business.

Taper-Peeled Posts vs Dowelled

VWP produces taper-peeled fence posts and rails, as well as dowelled rails. VWP does not produce dowelled fence posts because studies have shown that those posts have less strength, due to removing too much sapwood and not allowing the post to keep its natural taper. When too much sapwood is removed (the treatable part of a post), less preservative is retained in the post. This results in quicker rotting at the ground line.

To learn more about the benefits of taperpeeled posts, go to the web address below for a report on research done at the Faculty of Forestry of the University of Toronto.
