

VWP Premium Coloured Pine Mulch is an attractive addition to any yard. Because we use only a premium colourant, and a unique wood fibre, you will find our product is the perfect landscaping addition to any property.

Our premium landscaping shavings are competitively priced, and available in the following colours:

Premium Black

Premium Ameri Red

Premium Sedona Brown

Uncoloured Natural Mulch is also available

VWP mulch products can be used in a wide range of applications, from landscaping to playground surfacing. Very few mulch manufacturers can sell their products as Certified Mulch because of chemicals or foreign objects mixed in with their products. Since our mulch is made from 100% pure virgin fibre, we are able to have our products certified to meet international safety standards.

Our mulch products are currently in the certification process with full certification expected late 2018.

Premium Coloured Pine Mulch

Natural, attractive, safe, and long-lasting

 **VWP** VERMETTE
WOOD
PRESERVERS
ESTABLISHED 1973

At Vermette Wood Preservers (VWP) we are excited about our newest product offering: Premium Coloured Pine Mulch. These landscaping shavings come in three attractive colours – perfect for any landscaping design.

Dyed with non-toxic colouring agents, our wood shavings provide excellent weed suppressant, reduce watering costs by increasing moisture retention, and provide erosion control, all while retaining their colour longer than other similar products *and* looking beautiful at the same time.

Benefits of VWP Premium Coloured Pine Mulch

Consumer safety first

VWP uses only 100% virgin wood fibre, with no hazardous metal or plastic content. Other manufacturers reprocess wood pallets and other treated wood products, increasing the chances of foreign objects such as nails and screws being spread in your yard.

Non-toxic colourants

The dyes we use are low in Volatile Organic Compounds (VOCs) and are safe for children, pets, trees, and shrubs.

Vivid, long-lasting colours

VWP is unique, in that we use the most porous part of a tree, the sapwood. Colouring agents penetrate deeper into sapwood, resulting in a rich, vivid, longer-lasting product. Plus, the colourants we use received the highest possible ratings for resistance to fading in both sunlight and adverse weather.

Interlocking stability

Our shavings have a distinctive surface area, one that grips adjacent pieces and binds to them, so they are less likely to blow away or move around in the wind.
